## **Platforms and Open Standards**

Écrit par Administrator Mercredi, 11 Octobre 2006 04:22 - Mis à jour Mardi, 16 Décembre 2008 15:34

Joomla! runs on any platform including Windows, most flavours of Linux, several Unix versions, and the Apple OS/X platform. Joomla! depends on PHP and the MySQL database to deliver dynamic content.

The minimum requirements are:

- Apache 1.x, 2.x and higher
- PHP 4.3 and higher
- MySQL 3.23 and higher

It will also run on alternative server platforms such as Windows IIS - provided they support PHP and MySQL - but these require additional configuration in order for the Joomla! core package to be successful installed and operated.
